

Aerobic Digester

ATL 300

Designed to fit and operate in a busy kitchen environment, this digester requires minimum maintenance to keep it working at its full potential. These machines work best with a constant feed of mixed food within over a 24-hour period.

With the capability of digesting 300kg of mixed food waste in any 24-hour period the machine is a totally self-contained unit that only requires a power feed, hot and cold water, along with piping to a waste drainage.

The ATL300 can measure and record the digesters food weight data, which is display on a touch screen panel. To complement the digested weight data information, we offer an add on package, which provides a key recognition system, fitted to the touch screen HMI panel allowing a individual sign in and quick multiple choice options to

categorise the waste option input, this data along with the digested weights is then all automatically uploaded to a data storage cloud.

SPECIFICATION

- 1300L x 980W x 1750H
- 600L Tank
- 300KG Waste Capacity
- 240v single phase electricity supply required
- Approx 300kg waste digested within any 24-hour period
- HMI Touch screen panel
- Interlocked safety door
- Full stainless steel construction
- Requires hot and cold feed of water
- Single drain outlet coupling
- Full food weight analyse available from HMI Options
- Usage trends up loaded to a data storage cloud
- HMI key recognition system
